

Steps to setup extension :-

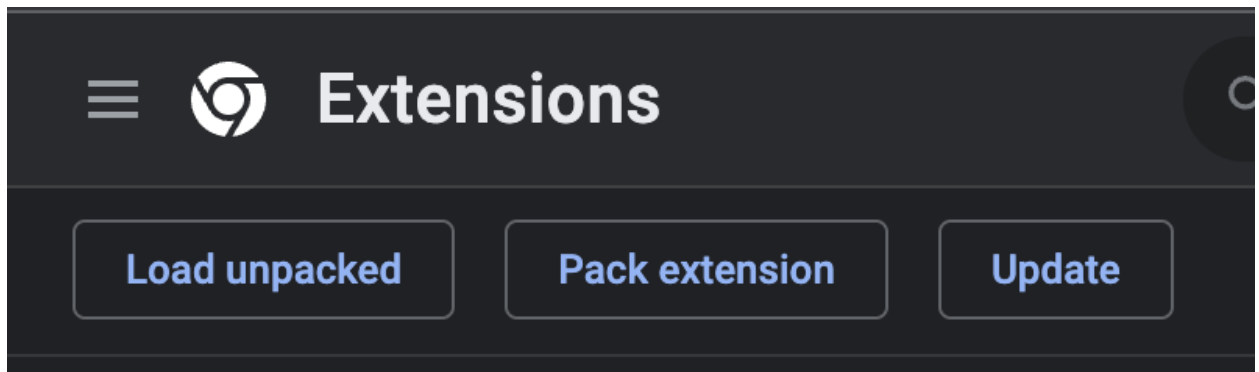

- Clone the repository and install the necessary packages  
Command: *npm install*
- Run command *npm run start:dev* to compile all the files
- After this command is executed a dist folder will be created in the project

- Go to Chrome and open the extensions page and enable developer mode

- Select Load unpacked and select the dist folder created above to load the excheqr extension

- Now go to any DApp and open wallet connect
- It will automatically read the URI from the QR Code (Make sure to give clipboard read permission) and then the drawer will open on the right side
